

SHODWE HOTELS & RESORTS — EXCEL DASHBOARD PRESENTATION GUIDE

Complete Speaking Script, Detailed Visual Breakdown & Short-Form Cheat Sheet

EXCEL MASTER
GUIDE
4 SHEETS · 134,590
BOOKINGS

1. HOW TO OPEN YOUR PRESENTATION TO SIR

SHORT FORM SUMMARY (ELEVATOR PITCH IN 15 SECONDS)

"Sir, our Excel dashboard models 134,590 bookings across 25 hotels in 4 cities over 3 months, generating ₹1.71 Billion in net cash. It is structured into 4 sheets: Executive Command Center, Financial Realisation, Capacity Pricing, and Distribution Channels."

EXACT WORD-FOR-WORD SCRIPT (SAY THIS CONFIDENTLY)

"Good morning, Sir. Today I am presenting the Comprehensive Excel Business Intelligence Dashboard suite built for Shodwe Hotels & Resorts.

Our project analyzes 3 months of operational data across 25 hotel properties located in 4 major metropolitan markets: Mumbai, Bangalore, Hyderabad, and Delhi.

During this period, the portfolio handled 134,590 reservations, achieving an overall Occupancy of 57.87% and generating ₹1,708.8 Million (₹1.71 Billion) in realized net revenue.

To make our analysis easy for leadership to review, I have divided the workbook into four focused dashboard sheets:

- Sheet 1: Executive Command Center ('Dashboard') — High-level portfolio health and core KPIs.
- Sheet 2: Revenue & Financial Realisation ('01_Financial_Realisation') — Audit of gross-to-net revenue leakage.
- Sheet 3: Capacity, Occupancy & Dynamic Pricing ('02_Capacity_Pricing') — Room capacity utilization and the weekend pricing gap.
- Sheet 4: Channels, Conversion & Cancellations ('03_Channels_Strategy') — OTA channel mix, cancellation drain, and guest reviews.

Allow me to walk you through each sheet, card by card and chart by chart."

EXCEL MODEL STRUCTURE & PIVOT ARCHITECTURE

How the Excel Workbook is Built (Calculations Sheet to Dashboards)

The workbook utilizes a clean separation between **Data**, **Calculations**, and **Visual Presentation**:

1. **Underlying Pivot Tables:** Stored on the `Calculations` worksheet, aggregating raw bookings by Week, City, Room Category, Platform, and Property.
2. **Dynamic Report Connections:** Slicers for City, Room Class, and Week Number are linked to all Pivot Tables simultaneously, updating all KPI cards and charts dynamically.
3. **Canvas Architecture:** Visuals are arranged on dedicated dashboard sheets with high-contrast executive formatting for maximum visual clarity.

2. SHEET 00: EXECUTIVE COMMAND CENTER (`DASHBOARD`) — KPI CARDS

Purpose: C-level summary dashboard giving executive leadership a 30-second snapshot of portfolio financial viability, bookings, occupancy, and pricing discipline.

Figure 1: Executive Command Center Dashboard in Excel featuring 6 Core KPI Cards, 3 Visuals, and Interactive Slicers.

SHORT FORM EXPLANATION (EXECUTIVE SUMMARY)

"Top-line revenue is ₹1.71B from 134.6K bookings. Occupancy is 57.87%, ADR is healthy at ₹12,696, but RevPAR is ₹7,347 due to 42% unsold rooms. 24.8% cancellation rate is our main challenge."

Card-by-Card Detailed Breakdown & Speaking Scripts

KPI CARD	EXACT VALUE	EXCEL FORMULA & DEFINITION	WHAT TO SAY TO SIR (VERBATIM SCRIPT)
Total Revenue Realized	₹1,708.8M	SUM(revenue_realized) Actual cash earned from stays that were completed ("Checked Out").	"Sir, this first card is our primary top-line metric: Realized Revenue of ₹1,708.8 Million (₹1.71 Billion). This is the actual cash collected after deducting customer cancellations and refunds."
Total Bookings	134,590	COUNT(booking_id) Total gross reservation volume across all 25 properties.	"Sir, our second card shows Total Bookings of 134,590 reservations. This confirms strong gross market demand across our 25 hotels over the 92 operating days."
Occupancy Rate	57.87%	Bookings / Capacity 134,590 booked / 232,576 sellable room-nights.	"Sir, our occupancy is 57.87%. Out of 232,576 available room-nights, we successfully filled nearly 58%. The luxury benchmark is 65%+, indicating an unutilized capacity gap."
Average Daily Rate (ADR)	₹12,696	Gross Revenue / Bookings Average price guests agreed to pay per room night.	"Sir, ADR measures pricing discipline. When guests book a room, they pay an average rate of ₹12,696, confirming our strong luxury brand equity."
RevPAR	₹7,347	Realized Revenue / Total Capacity or ADR × Occupancy%	"Sir, RevPAR combines price and volume. Because occupancy is 57.87%, our actual yield per sellable room drops to ₹7,347, highlighting a ₹5,349 uncaptured yield gap."
Cancellation Rate	24.83%	Cancelled / Total Bookings 33,420 cancelled / 134,590.	"Sir, our sixth card is our primary operational warning: a Cancellation Rate of 24.83%. Almost 1 out of every 4 bookings placed was cancelled, representing ₹298.8 Million in gross booking value lost."

2. SHEET 00: EXECUTIVE COMMAND CENTER (`DASHBOARD`) — CHARTS & SLICERS

Chart 1: Weekly Realized Revenue Trajectory (W19 – W32)

Chart Type: Line & Area Combo Chart | X-Axis: Operating Weeks (W19–W32) | Y-Axis: Realized Revenue (₹ Millions)

SHORT FORM SUMMARY

Weekly revenue is very steady at ~₹139M/week. Week 32 shows ₹21M only because it is a partial week with 3 operating days.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, looking at this top weekly revenue chart, you can see exceptional revenue stability across all full operating weeks, consistently delivering between ₹138 Million and ₹139.7 Million. This shows highly predictable base demand. The drop in Week 32 down to ₹21 Million is strictly an artifact of the dataset ending mid-week on July 31st."

Chart 2: City Performance & Revenue Contribution

Chart Type: Clustered Horizontal Bar Chart | Categories: Mumbai, Bangalore, Hyderabad, Delhi

SHORT FORM SUMMARY

Mumbai brings nearly 40% (₹668.6M), Bangalore 24.6% (₹420.4M), Hyderabad 19% (₹325.2M), and Delhi 17.2% (₹294.5M). Delhi has the highest occupancy at 60.5%.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this city performance chart clearly shows that Mumbai is our commercial powerhouse, bringing in ₹668.6 Million—which is nearly 40% of our entire company revenue—driven by our 8 properties there. Bangalore is our second largest market at ₹420 Million. While Delhi has the smallest revenue at ₹294.5 Million, that is only because it has 3 properties; on a per-hotel basis, Delhi actually has our highest occupancy at 60.5%."

Chart 3: Room Category Revenue Share

Chart Type: Donut / Column Chart | Categories: Elite, Premium, Presidential, Standard

SHORT FORM SUMMARY

Elite rooms lead at ₹560.3M (32.8%), Premium brings ₹462.2M (27%), Presidential ₹376.8M (22.1%), Standard ₹309.6M (18.1%). Premium rooms drive 82% of revenue.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this room category chart proves our luxury positioning. Our three premium tiers—Elite, Premium, and Presidential—generate 81.9% of all portfolio revenue, led by Elite rooms at ₹560.3 Million. Standard budget rooms account for less than 19% of our revenue."

Dynamic Slicers: City, Room Class, Week Number

Excel Mechanism: Connected across all Pivot Tables via Report Connections.

SHORT FORM SUMMARY

Clicking any slicer (e.g. Mumbai or Elite) filters all cards and charts dynamically in real time.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, these slicers on the side are fully interactive. If you click on 'Mumbai', the entire dashboard dynamically filters to show Mumbai's ₹668.6M revenue, its weekly trajectory, and its room class breakdown. We can filter by any city, room category, or specific week in real time."

3. SHEET 01: REVENUE & FINANCIAL REALISATION ('01_FINANCIAL_REALISATION') — KPIS

Purpose: A forensic financial audit tracking how ₹2.01 Billion in gross bookings turns into ₹1.71 Billion in actual cash, auditing cancellations and category splits.

Figure 2: Financial Realisation Dashboard in Excel featuring Revenue Bridge Waterfall, Category Split, and Property Yield Spread.

SHORT FORM EXPLANATION (EXECUTIVE SUMMARY)

"Gross sales were ₹2.01B. Cancellations drained ₹298.8M, but hotel cancellation fees recovered ₹199.2M, leaving ₹1.71B net cash. Luxury hotels drive 61.6% of revenue."

Card-by-Card Detailed Breakdown & Speaking Scripts

KPI CARD	EXACT VALUE	ACCOUNTING DEFINITION	WHAT TO SAY TO SIR (VERBATIM SCRIPT)
Gross Invoiced	₹2,007.5M	<code>SUM(revenue_generated)</code> Total gross contractual value of all 134,590 bookings placed.	"Sir, on this Financial Realisation sheet, our first card is Gross Invoiced Revenue of ₹2,007.5 Million. This is the total contractual booking value placed by customers before any cancellations or refunds occur."
Refund Drain	₹298.8M	<code>SUM(revenue_lost)</code> Gross revenue lost directly to 33,420 cancelled reservations.	"Sir, our second card shows our Refund Drain of ₹298.8 Million. When 33,420 bookings were cancelled, this gross revenue was wiped out, representing a 14.9% drain on gross sales."
Fees Retained	₹199.2M	Cancellation penalties and retention fees collected per policy.	"Sir, our third card is Fees Retained of ₹199.2 Million. Thankfully, under our hotel cancellation terms, we retained nearly ₹200 Million in cancellation fees, which softened the financial impact of customer cancellations."
Luxury Share	61.6%	₹1,052.8M realized across 16 Luxury properties.	"Sir, this card shows our Luxury Category Share of 61.6%. Our 16 luxury properties generated ₹1.05 Billion, proving that luxury hospitality is our core profit engine."
Business Share	38.4%	₹656.0M realized across 9 Business properties.	"Sir, our Business Category Share is 38.4%. Our 9 business hotels generated ₹656 Million, providing dependable corporate weekday cash flow."

3. SHEET 01: REVENUE & FINANCIAL REALISATION (`01\_FINANCIAL\_REALISATION`) — CHARTS

Chart 1: Gross Invoiced to Net Realized Revenue Bridge

Chart Type: Waterfall / Financial Bridge Chart | Flow: Gross Invoiced → Less Refund → Plus Retained → Net Realized

SHORT FORM SUMMARY

Shows the bridge: ₹2,007.5M Gross - ₹298.8M Refunds + ₹199.2M Retained Fees = ₹1,708.8M Net Realized Revenue.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this waterfall chart is our Financial Bridge. It answers the critical executive question: 'Where did our money go?' You can clearly explain to management that we started with ₹2.01 Billion in gross bookings. Cancellations drained ₹298.8 Million, but our cancellation policy recovered ₹199.2 Million in retained fees, leaving us with our final net realized revenue of ₹1,708.8 Million."

Chart 2: Property Category Revenue Split (Luxury vs. Business)

Chart Type: Donut Chart | Segments: Luxury (16 hotels, ₹1,052.8M) vs. Business (9 hotels, ₹656.0M)

SHORT FORM SUMMARY

16 Luxury hotels average ₹65.8M each (61.6% share). 9 Business hotels average ₹72.9M each (38.4% share).

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this donut chart breaks down our revenue by hotel category. Luxury accounts for 61.6% across 16 properties, averaging ₹65.8 Million per hotel. Business accounts for 38.4% across 9 properties, averaging ₹72.9 Million per hotel because business hotels have higher corporate density."

Chart 3: ADR vs. RevPAR Yield Spread Across All 25 Properties

Chart Type: Dual-Axis Clustered Line Chart | X-Axis: 25 Properties (16558 to 18563) | Y-Axis: ADR vs. RevPAR (₹)

SHORT FORM SUMMARY

Compares price charged (ADR) against actual yield (RevPAR) for each hotel. Wide gap = high room price but low occupancy (yield leakage).

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this diagnostic chart is critical for property asset management. The top line represents ADR—what we charge per sold room. The lower line represents RevPAR—what we actually earn across all sellable rooms. Wherever you see a wide spread—such as in Atliq Seasons Mumbai where ADR is ₹16,606 but RevPAR is only ₹7,410—it proves that the hotel is charging premium rates but failing to fill rooms, exposing uncaptured yield."

4. SHEET 02: CAPACITY, OCCUPANCY & DYNAMIC PRICING (`02\_CAPACITY\_PRICING`) — KPIS

Purpose: Diagnose room inventory utilization and reveal the single biggest profit opportunity in the company: **The Weekend Static Pricing Flaw.**

Figure 3: Capacity Utilization, Weekend Surge Spread, and Property Occupancy Rankings in Excel.

SHORT FORM EXPLANATION (EXECUTIVE SUMMARY)

"Total capacity is 232.6K rooms. Weekday occupancy is 51.34%, but weekend occupancy surges to 73.58%. However, our prices stay flat (+₹45), leaving ₹9.59 Crores on the table."

Card-by-Card Detailed Breakdown & Speaking Scripts

KPI CARD	EXACT VALUE	OPERATIONAL DEFINITION	WHAT TO SAY TO SIR (VERBATIM SCRIPT)
Total Sellable Capacity	232,576	Physical room inventory multiplied by 92 operating days.	"Sir, moving to Page 2, our first card is Total Capacity of 232,576 sellable room-nights. Unlike manufacturing, hotel rooms are perishable inventory—if a room is not sold tonight, that revenue is gone forever."
Successful Bookings	134,590	Total reservations successfully placed into room inventory.	"Sir, our second card shows 134,590 Successful Bookings, leaving exactly 97,986 unsold room-nights across our 92 operating days."
Weekend Occupancy	73.58%	Occupancy on Friday and Saturday nights across portfolio.	"Sir, this third card is our Weekend Occupancy of 73.58%. On weekends, our hotels experience massive demand surges due to weddings, staycations, and leisure travel."
Weekday Occupancy	51.34%	Occupancy from Sunday through Thursday nights.	"Sir, our fourth card is Weekday Occupancy of 51.34%. On weekdays, occupancy plummets by over 22 percentage points, leaving nearly half our rooms empty."
Surge Revenue Upside	+₹9.59 Cr	Potential incremental profit via ~15.7% weekend dynamic pricing surge.	"Sir, this fifth card represents our biggest consulting recommendation: +₹9.59 Crores in Surge Revenue Upside by fixing our static pricing model."

4. SHEET 02: CAPACITY, OCCUPANCY & DYNAMIC PRICING (`02\_CAPACITY\_PRICING`) — CHARTS

Chart 1: Weekly Capacity Utilization & Occupancy Trajectory

Chart Type: Area & Line Combo Chart | Metrics: Capacity (232.6K total) vs. Bookings

SHORT FORM SUMMARY

Capacity is fixed at ~17.5K rooms/week. The gap represents ~7,000 unsold empty rooms every week.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this chart visualizes our capacity envelope over time. The shaded gap between total capacity and actual bookings represents our unsold room inventory—consistently around 7,000 empty rooms every week. This visual proves that our capacity is fixed, so our only levers for revenue growth are increasing occupancy or increasing rate."

Chart 2: Weekend vs. Weekday Occupancy & Static Pricing Gap (THE BIGGEST REVELATION!)

Chart Type: Clustered Column Chart | Metrics: Occupancy (73.6% vs 51.3%) & ADR (₹12,724 vs ₹12,679)

SHORT FORM SUMMARY

Weekend occupancy surges by +22.24%, but ADR only changes by ₹45. Applying dynamic surge pricing (+15-20%) unlocks +₹9.59 Cr profit.

EXECUTIVE SPEAKING SCRIPT FOR SIR (CRITICAL DEFENSE MOMENT)

"Sir, please look closely at this chart, because this is the single most important finding in our entire analysis!

Look at the occupancy bars: on weekends, occupancy jumps from 51.3% to 73.6%—an increase of over 22 percentage points! Demand is booming.

Now look at the pricing bars right next to it: on weekdays our ADR is ₹12,679, and on weekends our ADR is ₹12,724. That is a difference of just ₹45!

This proves mathematically that Shodwe is operating on a Flat, Static Pricing Model. When airlines or Uber see demand surge by 22%, they raise prices. If Shodwe introduces dynamic surge pricing of just 15% to 20% on weekends, we will capture ₹9.59 Crores in pure incremental profit without losing a single booking!"

Chart 3: Top 5 & Bottom 5 Hotel Properties by Occupancy Rate

Chart Type: Ranked Horizontal Bar Chart | Leaders: Delhi & Hyderabad | Lagging: Mumbai Seasons

SHORT FORM SUMMARY

Atliq Grands Delhi leads at 65.8% occupancy. Atliq Seasons Mumbai is lowest at 44.6% and needs promotional intervention.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this ranking chart identifies operational outliers across our 25 hotels. Atliq Grands in Delhi is our star performer at 65.8% occupancy. Conversely, Atliq Seasons in Mumbai is operating at an unacceptable 44.6% occupancy despite being in our highest-revenue city. This hotel requires immediate management intervention, such as corporate tie-ups or packaged promotions."

5. SHEET 03: CHANNELS, CONVERSION & CANCELLATIONS ('03_CHANNELS_STRATEGY') — KPIS

Purpose: Analyze third-party OTA dependency, map booking conversion funnel leakage, and evaluate guest satisfaction ratings across cities.

Figure 4: Booking Fulfillment Funnel, Channel Distribution Risk Matrix, and Guest Ratings in Excel.

SHORT FORM EXPLANATION (EXECUTIVE SUMMARY)
"87% of bookings come from OTAs (15-20% commission). Direct booking is only 12.92%. 24.83% of bookings are cancelled. Guest rating is 3.62/5.0."

Card-by-Card Detailed Breakdown & Speaking Scripts

KPI CARD	EXACT VALUE	OPERATIONAL DEFINITION	WHAT TO SAY TO SIR (VERBATIM SCRIPT)
'Others' Platform Share	40.91%	55,066 bookings coming through unclassified booking sources.	"Sir, turning to Page 3 on Distribution, our first card reveals a major data governance blind spot: 40.91% of our bookings are tagged as 'Others'. That means ₹699.4 Million in revenue is coming from sources we cannot specifically identify."
Cancellation Rate	24.83%	33,420 cancelled reservations / 134,590 total bookings.	"Sir, our second card is our Cancellation Rate of 24.83%. Over 33.4 thousand bookings were cancelled, largely driven by lenient zero-fee cancellation policies on third-party OTA channels."
No-Show Rate	5.02%	6,759 guests who booked rooms but never arrived at the front desk.	"Sir, our third card is a No-Show Rate of 5.02%. Over 6,700 rooms were held for guests who never showed up, preventing those rooms from being sold to walk-in customers."
Direct Booking Share	12.92%	Direct Online (9.9%) + Direct Offline (3.0%) share of volume.	"Sir, our fourth card shows that Direct Bookings represent only 12.92% of our business. This means over 87% of our bookings come from OTAs where we pay 15% to 20% in commission fees."
Average Guest Rating	3.62 / 5.0	Average rating from 56,700 guests who provided feedback.	"Sir, our fifth card is our Average Guest Rating of 3.62 out of 5.0. Delhi properties lead at 3.78, while Bangalore lags at 3.41, signaling service quality bottlenecks."

5. SHEET 03: CHANNELS, CONVERSION & CANCELLATIONS ('03_CHANNELS_STRATEGY') — CHARTS

Chart 1: Booking Fulfillment & Cancellation Funnel

Chart Type: 100% Stacked Funnel Bar | Conversion: Checked Out (70.15%), Cancelled (24.83%), No-Show (5.02%)

SHORT FORM SUMMARY

Out of 100 bookings: 70 complete stay (Realisation Rate 70.15%), 25 cancel, and 5 fail to show up.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this fulfillment funnel tracks guest conversion. Out of 100 people who make a reservation at Shodwe: 70 successfully check out (our 70.15% Realisation Rate), 25 cancel, and 5 fail to show up. Our strategic goal is to reduce cancellations from 25% down to 18%, which would push Realisation above 78% and add over ₹130 Million in net cash."

Chart 2: Distribution Channel Share & Cancellation Risk Matrix

Chart Type: Clustered Horizontal Bar Chart | Channel Mix: Others (40.91%), MakeMyTrip (19.99%), LogTrip (10.96%), Direct Online (9.94%), Tripster (7.16%), Journey (6.02%), Direct Offline (5.02%)

SHORT FORM SUMMARY

MakeMyTrip leads OTAs at 19.99% (26.9K bookings), LogTrip has 10.96%, Tripster has 7.16%, Journey has 6.02%. Direct Online is 9.94%. Shifting traffic to direct booking will save up to ₹40M in OTA commissions.

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, this channel matrix highlights our partner distribution. MakeMyTrip is our largest single identified OTA partner, driving 19.99% of bookings (26,898 bookings, ₹341.7M). However, because Direct Online is only 9.94% (13,379 bookings), we are losing an estimated ₹120–₹150 Million annually in OTA commission fees. Offering direct-booking incentives—such as complimentary high-speed Wi-Fi, free breakfast, or 2 PM late checkouts—will shift OTA traffic to our direct website."

Chart 3: Guest Ratings vs. Strategic Turnaround Roadmap

Chart Type: City Ratings vs. ADR Matrix | Metrics: Delhi (3.78, ₹12.2K), Hyderabad (3.66, ₹9.3K), Mumbai (3.65, ₹15.4K), Bangalore (3.41, ₹13.1K)

SHORT FORM SUMMARY

Delhi leads at 3.78 (ADR ₹12,154), Hyderabad at 3.66 (ADR ₹9,322), Mumbai at 3.65 (ADR ₹15,387), Bangalore lags at 3.41 (ADR ₹13,131).

EXECUTIVE SPEAKING SCRIPT FOR SIR

"Sir, our final visual maps guest satisfaction against pricing power. Delhi achieves our highest satisfaction rating at 3.78 (ADR ₹12,154), Hyderabad is at 3.66 (ADR ₹9,322), Mumbai is at 3.65 (ADR ₹15,387), while Bangalore lags at 3.41 (ADR ₹13,131). In hospitality, ratings directly influence OTA search rankings and repeat visits. We propose 4 strategic initiatives:

- 1. Implement weekend dynamic surge pricing;
- 2. Launch a direct booking loyalty program;
- 3. Conduct a quality audit in Bangalore hotels; and
- 4. Tighten 24-hour cancellation windows to reduce speculative bookings."

6. TOP 10 QUESTIONS SIR MIGHT ASK IN EXCEL DEFENSE (PART 1: Q1 TO Q5)

Q1: "What is the difference between ADR and RevPAR? Why can't we just look at ADR?"

Winning Answer: "Sir, ADR (Average Daily Rate = ₹12,696) measures pricing power per **sold room**. RevPAR (Revenue Per Available Room = ₹7,347) measures total property efficiency across **all available rooms** (sold or unsold). If a hotel prices its rooms at ₹25,000 but only fills 10% of them, its ADR is high, but its RevPAR is terrible (₹2,500). RevPAR combines pricing discipline with occupancy yield ($ADR \times \text{Occupancy}\%$), making it the gold standard in hospitality."

Q2: "Why is Mumbai bringing 39% of our revenue when Delhi has higher occupancy?"

Winning Answer: "Sir, Mumbai has 8 hotels with huge room capacity, so its sheer scale generates ₹668.6 Million. Delhi only has 3 hotels. While each Delhi hotel is fuller (60.5% occupancy vs Mumbai's 57.9%), Mumbai has nearly three times more sellable room inventory, resulting in far higher total revenue."

Q3: "What does Realisation Rate mean and how is it calculated?"

Winning Answer: "Sir, Realisation Rate is the percentage of total booked reservations that actually materialize into completed stays (Checked Out guests). $\text{Realisation\%} = \text{Checked Out Bookings (94,411)} / \text{Total Bookings (134,590)} = 70.15\%$. The remaining 29.85% is lost to cancellations (24.83%) and no-shows (5.02%)."

Q4: "How did you calculate the ₹9.59 Crore dynamic pricing upside on Sheet 02?"

Winning Answer: "Sir, our weekend occupancy surges to 73.58%, representing approximately 48,000 weekend bookings over the 3-month window. Currently, we charge virtually the same rate on weekends (₹12,724) as weekdays (₹12,679)—a ₹45 difference. If we apply dynamic surge pricing (+₹1,998 per room), $48,000 \text{ bookings} \times ₹1,998 = \text{₹9.59 Crores}$ in pure incremental profit."

Q5: "Why did you separate calculations onto a separate sheet in Excel?"

Winning Answer: "Sir, in professional financial modeling, mixing raw data, formulas, and visual presentations on one sheet leads to formula corruption and visual clutter. Separating them into raw data, a dedicated 'Calculations' sheet for Pivot Tables, and presentation dashboards ensures clean report connections and allows instant refreshing when new data is added."

6. TOP 10 QUESTIONS SIR MIGHT ASK IN EXCEL DEFENSE (PART 2: Q6 TO Q10)

Q6: "Why is 40.91% of our bookings categorized as 'Others' platform?"

Winning Answer: "Sir, 'Others' is an aggregation of smaller regional travel agents, corporate offline desks, walk-in guests, and untagged portals. It represents ₹699.4 Million in revenue. My recommendation is to implement UTM tracking tags and CRS source codes to unpack this category so marketing can identify which sub-channels drive the most profit."

Q7: "Why did revenue drop so sharply in Week 32?"

Winning Answer: "Sir, Week 32 only contains 3 operating days (July 29 to July 31) before the dataset cuts off, compared to full 7-day operating weeks (W19–W31). On a daily basis, Week 32 generated ₹7.0M/day, which perfectly matches the average daily revenue of other weeks."

Q8: "What specific action should we take for Atliq Seasons in Mumbai?"

Winning Answer: "Sir, Atliq Seasons Mumbai has the lowest occupancy in the entire portfolio at 44.6%, despite commanding an ADR of ₹16,606. Its RevPAR is only ₹7,410. It is suffering from price resistance. We should introduce corporate weekday packages, bundle airport transfers and meals, and run targeted promotions on MakeMyTrip to lift occupancy above 55%."

Q9: "How can we reduce our 24.83% cancellation rate?"

Winning Answer: "Sir, currently OTAs offer free cancellations up to 24 hours prior to arrival, encouraging speculative multi-hotel bookings. We should: 1) Require non-refundable discounted rates for bookings made more than 14 days in advance; 2) Enforce credit card pre-authorization 48 hours prior to check-in; and 3) Introduce a 5% deposit for weekend peak dates."

Q10: "If you had 60 seconds with the CEO, what are your top 3 recommendations?"

Winning Answer: "Sir, my 3 strategic recommendations are:

1. **Implement Weekend Dynamic Surge Pricing (+15–20%):** Captures ₹9.59 Crores in uncaptured profit with zero additional operating cost.
2. **Overhaul OTA Cancellation Policies:** Require card pre-authorization to reduce the 24.8% cancellation drain and recover ~₹50M.
3. **Drive Direct Bookings via Guest Loyalty Perks:** Offering free breakfast or late checkouts for direct bookings will shift volume from OTAs and save up to ₹40M in commission fees."

7. MASTER EXCEL FORMULA CHEAT SHEET (TOP 10 HOSPITALITY METRICS)

Metric Name	Excel Formula Logic	Portfolio Value	Business Significance
Realized Revenue	SUM(revenue_realized)	₹1,708,771,229	Actual net top-line cash received from completed guest stays.
Gross Invoiced	SUM(revenue_generated)	₹2,007,546,215	Total contractual face-value of all reservations placed.
Total Capacity	SUM(capacity)	232,576	Total available sellable room-nights over 92 operating days.
Total Bookings	COUNT(booking_id)	134,590	Total reservation transactions recorded across all channels.
Occupancy %	Successful Bookings / Capacity	57.87%	Asset efficiency; percentage of sellable rooms occupied by guests.
ADR (Average Daily Rate)	Gross Revenue / Bookings	₹12,696	Average room rate agreed per booked room night; measures pricing power.
RevPAR	Realized Revenue / Total Capacity	₹7,347	Yield generated across all rooms, sold or unsold (ADR × Occupancy%).
Realisation Rate %	Checked Out / Total Bookings	70.15%	Conversion efficiency of reservations into checked-out guests.
Cancellation Rate %	Cancelled / Total Bookings	24.83%	Portion of reservations lost to guest cancellations.
No-Show Rate %	No Show / Total Bookings	5.02%	Portion of reservations where guests never arrived at the hotel.
Average Guest Rating	AVERAGE(ratings_given)	3.62 / 5.0	Customer satisfaction benchmark across 56.7K rated stays.

Summary for Excel Presentation: Keep your explanations focused on the business story: We have high pricing power (ADR ₹12,696) and stable demand (~₹139M/week), but our profit is leaking through two areas: 1) A 24.8% cancellation rate on OTAs, and 2) A flat weekend pricing model where demand surges by 22% but rates only change by ₹45. Addressing these two levers captures over ₹9.59 Crores in incremental profit.
